

How to harvest Hamstring Tendons? “The Safe Mode”

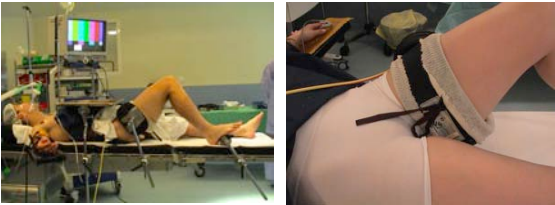

Philippe Landreau, Hubert Lanternier
Cédric Campens, Nicolas Graveleau
France

The safe mode in 5 steps

- ✓The Wave
- ✓The Bubble
- ✓The Right angle (or Hook)
- ✓The Expansions
- ✓The Stripper

Step 0: patient position

✓Tourniquet as high as possible, touch the
crotch, knee at 90° or more

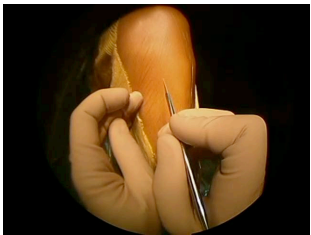

Step 1: The Wave

✓Through the skin

Step 1: The Wave

✓Incision centered on the superior
edge of this wave

Step 1: The Wave

✓Clean the fat with a sponge

✓ Superior edge of the Sartorius

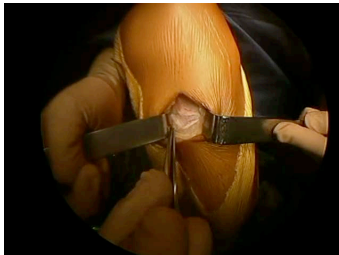

Step 2: The Bubble

- ✓ Make a delicate puncture on the superior edge: you burst the bubble!

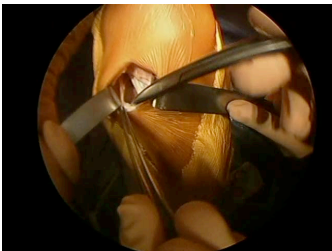

Step 2: The Bubble

- ✓ Grasp the inferior lip : it's the sartorius. Enlarge the puncture of the bubble with your scissors, 6 cm proximal, running on the superior edge of the sartorius

Step 2: The Bubble

- ✓ The bubble is open. The vertical fibers are the MCL. The inferior lip is the superior edge of the sartorius. Soon the hamstrings will be seen on the deep aspect of the sartorius

Step 3: The right angle

- ✓ Separate Sartorius and first hamstring (Gracilis)

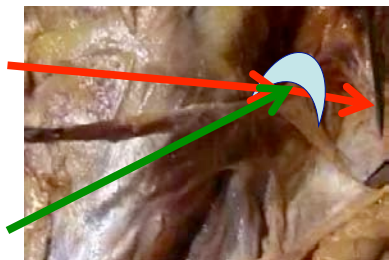

- ✓ Catch the tendon with the right angle proximally
