

# Extra-articular release for knee stiffness post- fracture

Jacques Menetrey

*Swiss Olympic Medical Center*

*Unité d'Orthopédie et Traumatologie du Sport (UOTS)*

*Service de chirurgie orthopédique et traumatologie de l'appareil moteur*

*University Hospital of Geneva ,*

*Geneva Switzerland*

# Management

- Initial fracture
- Implants
- Approach "double approaches"
- Degree of contracture
- Soft-tissue status
- Degree of patella capture

# Management

---

- Degree of fracture healing
  - Radiograph / Ct-scanner
  - Patella/medial tibial plateau
- Position of the patella
  - Lateral radiograph at 30° of flexion

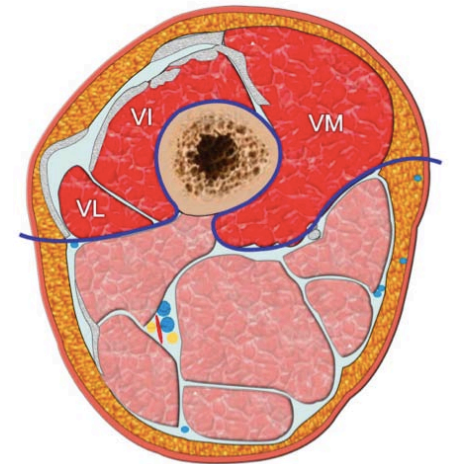

# Plan

---

- Arthroscopy
- Open approach (skin incision)
  - Release of the subcutaneous layer
  - Medial arthrotomy
  - Lateral arthrotomy
  - Release of the anterior compartment (PT release!!!)

# Plan

- Release of the supra-patellar, superomedial and superolateral pouch
- Release of the lateral recess
- Release of the deep part of the distal quad (tendons vastus med, vastus intermediary, vastus lat)

# Plan

---

- First manipulation under complete muscle relaxation
- Hardware removal
- Completion of the manipulation

# Associated procedures

---

- Complete hardware removal
- Rectus femoris proximal snip
- Proximalisation osteotomy of the tibial tubercle

# Objective

---

- To reach a durable 110-120° of knee flexion (Judet: excellent result)
- At least 90° of flexion
- To release the patella capture
- To obtain an active QUAD

# Case presentation

- Mrs G, 38 y old, airline pilot, MVA. Frontal collision. Complex tibial plateau fracture. 9 months post-ORIF. First manipulation under anesthesia at 6 months post-op. Persistent limited flexion to 60°.

# Case presentation

- Mr A.S. 44 y old, Policeman. Football accident: patellar chondral injury 3 years ago. 5 operations for cartilage, serial arthrolysis, proximal rupture of the patellar tendon. 3 years post-accident: Flexion limited to 45°.

# Mr A.S. 44 y old

# Arthroscopy

# Subcutaneous release

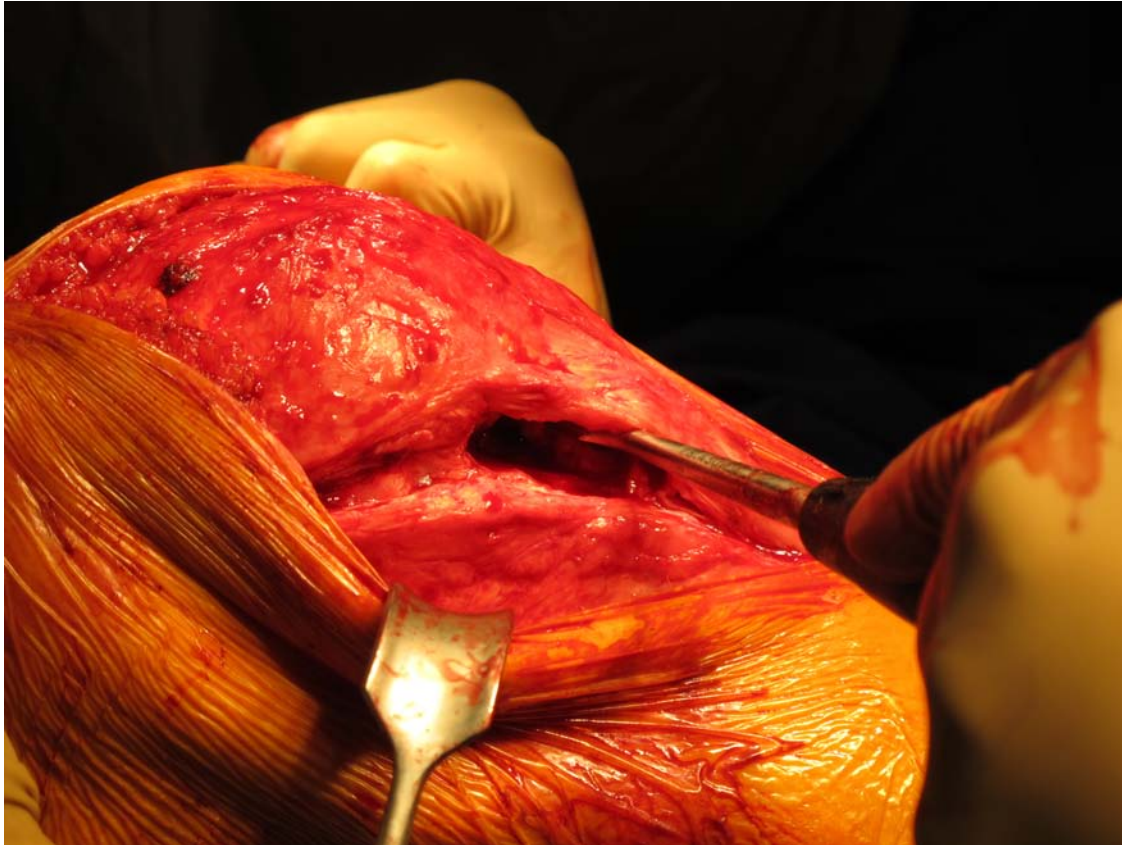

---

# Medial arthrotomy

# Patellar tendon release

# Lateral arthrotomy

---

# Lateral recess

---

# Distal quad release

---

# Distal quad release

---

# Distal quad release

---

Caution: perforating artery  
of the vastus lateralis

# Tibial tubercle OT

---

# Distal quad release

---

Caution: perforating artery  
of the vastus lateralis

# Tibial tubercle OT

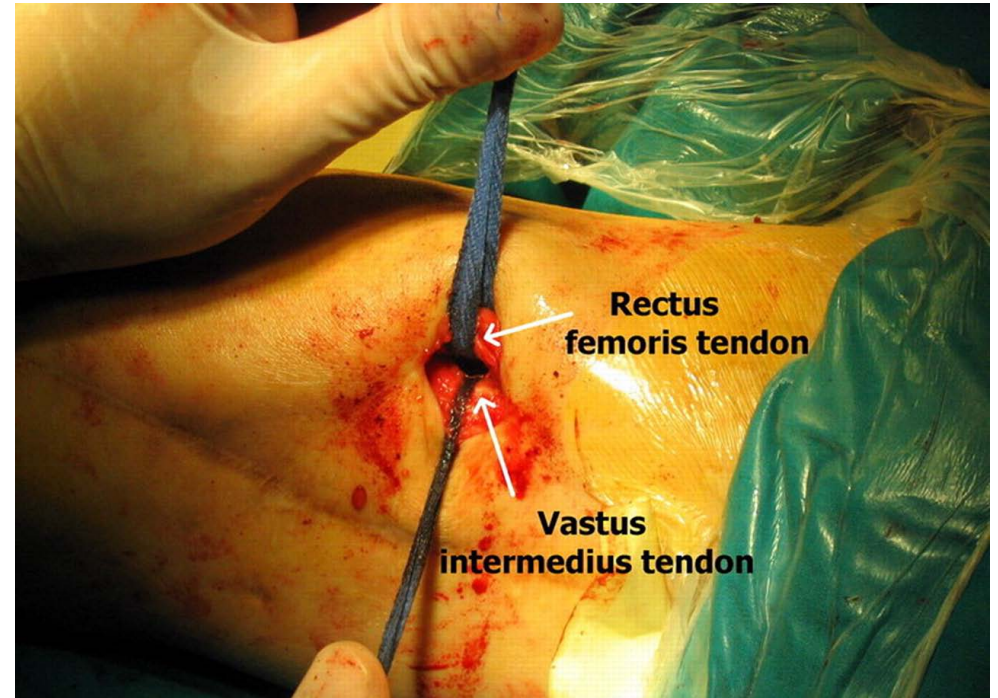

# Finally

# Judet quadricepsplasty Step III

- Only performed in case of distal and mid-shaft femur fracture

# Judet quadricepsplasty Step III

- Fully performed only in case of distal and mid-shaft femur fracture

# Post-op program

---

- Femoral nerve block
- Mobilization twice a day with the physical therapist for one week
- Maximal ROM
- Quad relaxation and patella mobilization
- Walk with weight-bearing as tolerated
- PT 3x per week for 3 months

# Post-op program

---

- PT in water from D10
- NSAID for 3 weeks
- Powerful pain killer as long as necessary
- Cycling as soon as possible
- No strenghtening before flexion  $> 110^\circ$

15<sup>th</sup> ESSKA Congress  
MAY 2-5, 2012  
GENEVA/SWITZERLAND

FACULTÉ DE MÉDECINE

# Case presentation

- Mr RFS, 17 y old, Mechanic. Scooter accident. Distal femur fracture and fracture - avulsion of the patella tip. Patello-tibial protective wire band for 8 weeks. FU 6 months: flexion limited to 80°

# Mr RFS 17 y old

- Arthroscopic release
- Removal of the K-wire and tension wire
- Manipulation under anesthesia
- Kept the LISS in place
- Post-op ROM : 130-0-0
