

# UNI, TOTAL OR BICOMPARTMENTAL KNEE OA: MY PHILOSOPHY

---

Nicolas PUJOL, MD

CH Versailles

[npujol@ch-versailles.fr](mailto:npujol@ch-versailles.fr)

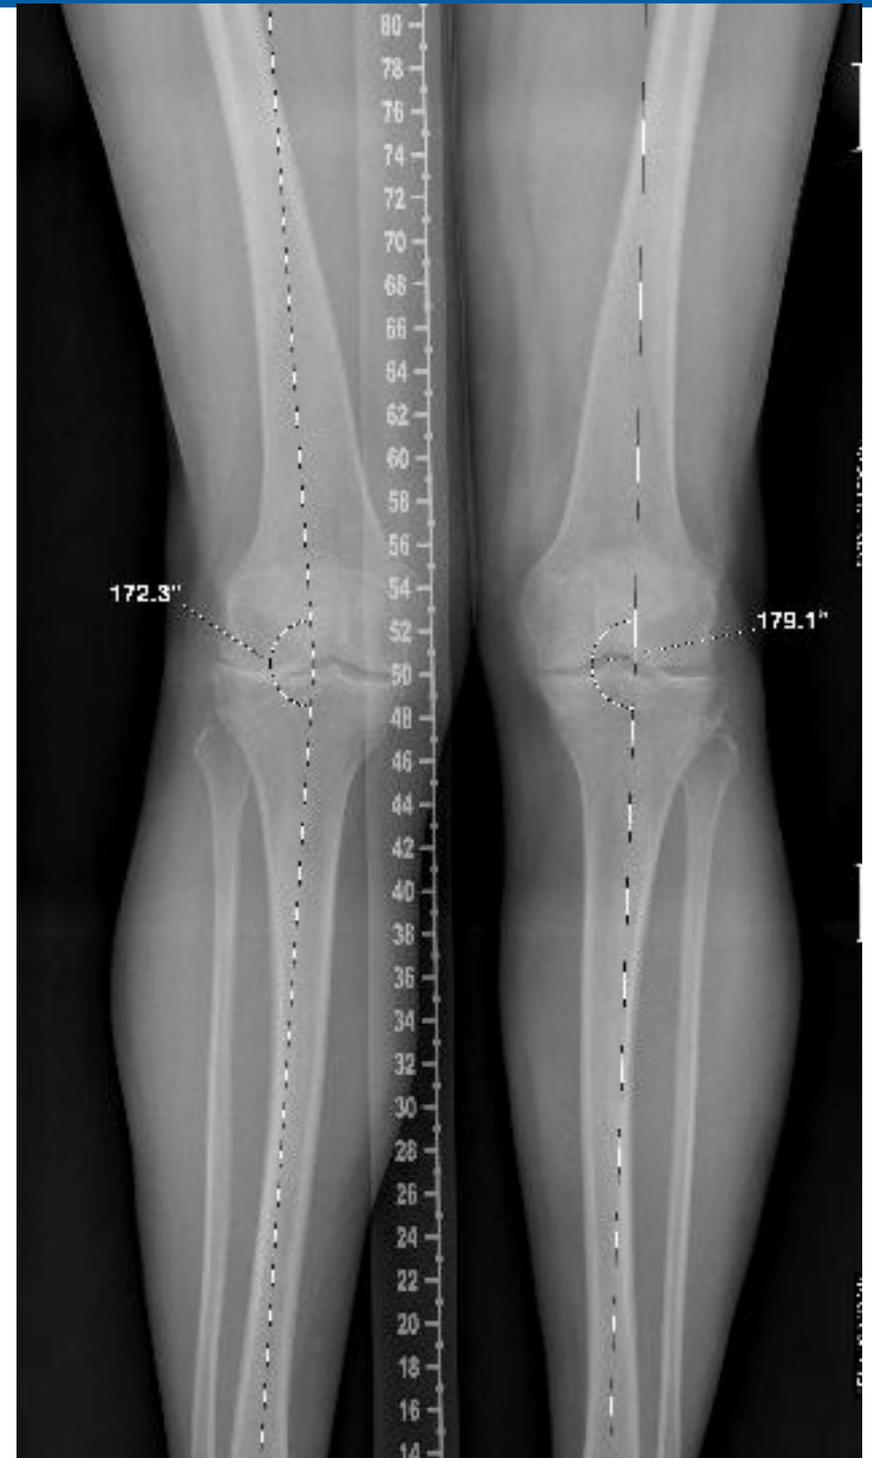

# Some typical examples

- Selection of patients
- Age
- Functional demand
- Location of the pain
- Laxity

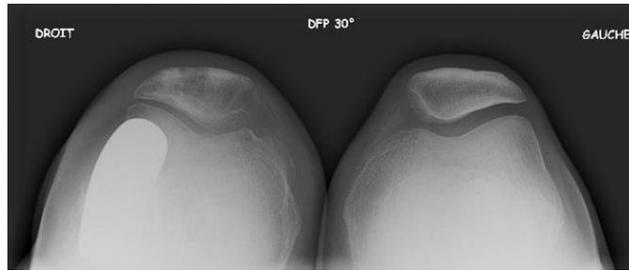

# Case 1

- 48 y
- 1980 ACL + Lateral meniscectomy
- Painful lateral side, unstable

Treatment:

- UNI+ACLR

# Case 2

88 Y  
Pain  
Both knees

# TREATMENT

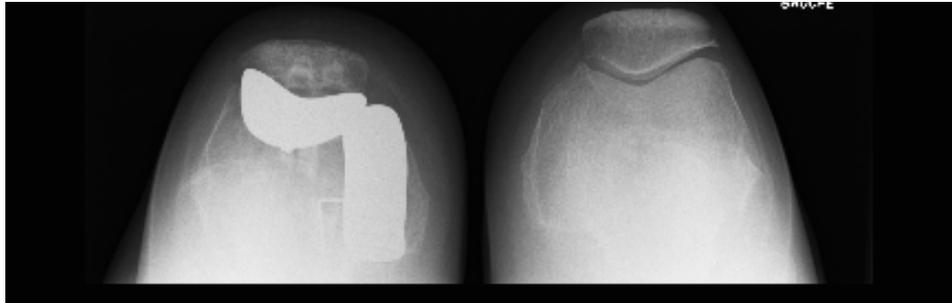

---

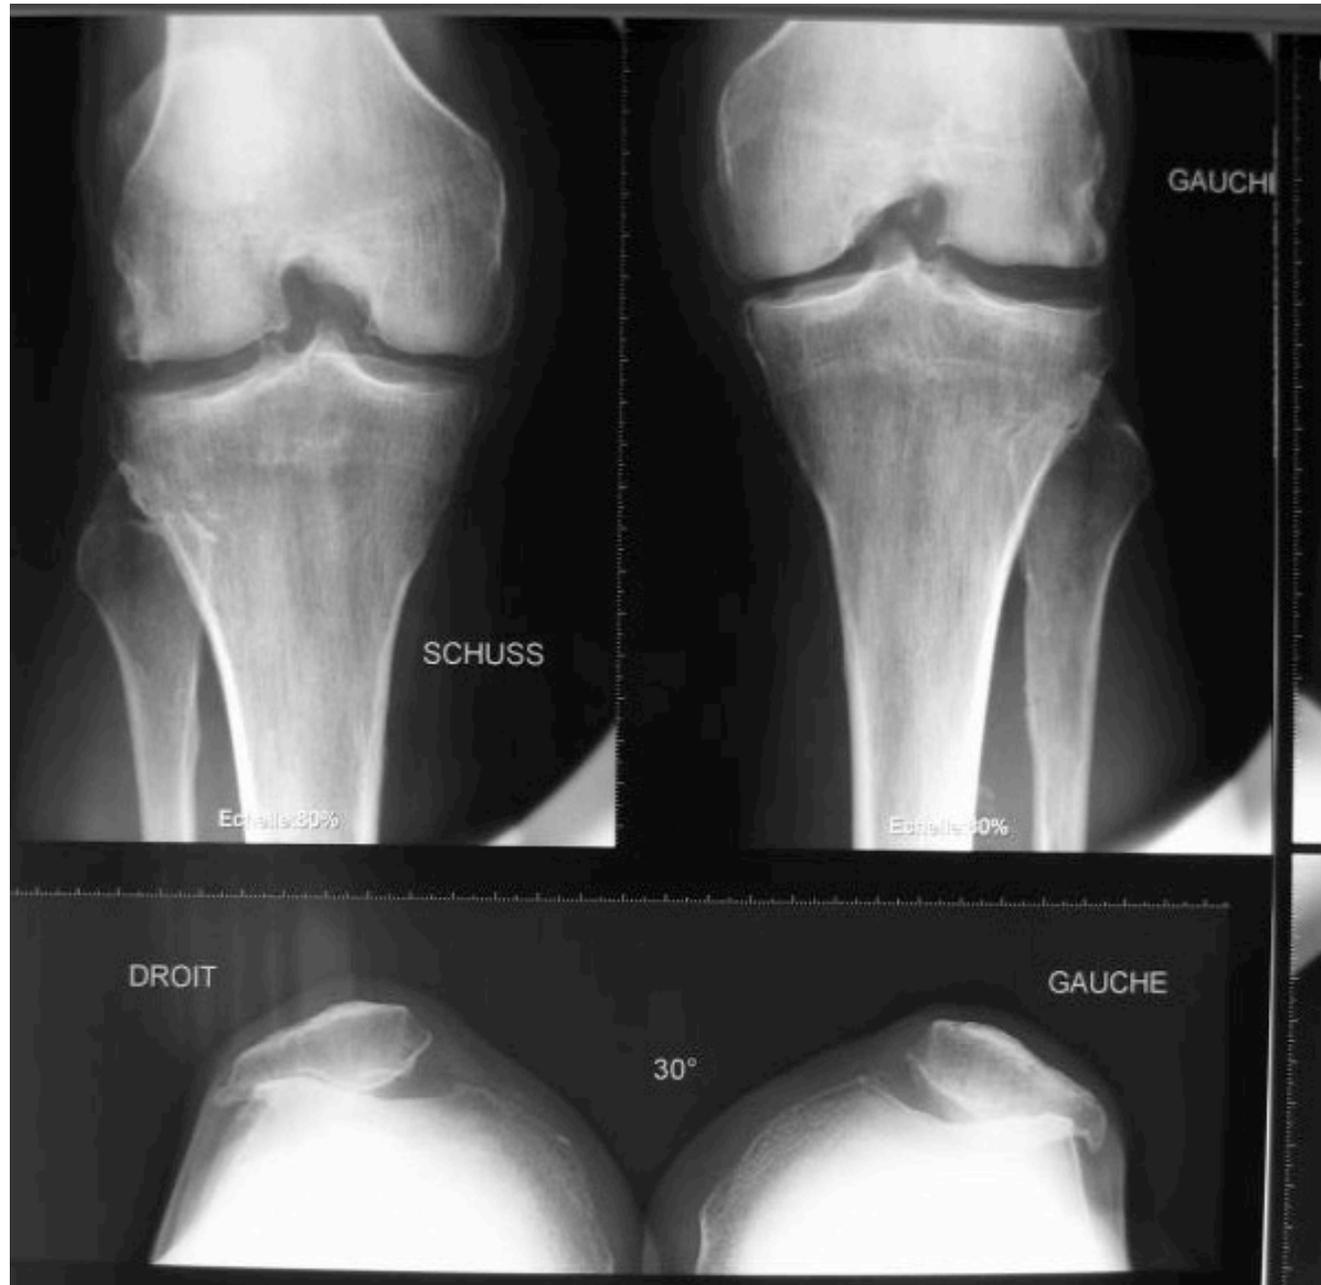

# Case 3

- REAL bicompartamental OA
- Medial meniscectomy long time ago
- AND: PF OA (patellar fracture long time ago)
- SO: UNI OA X2

# CASE 4: Mr X: 90 y

# Conclusions:

- Surgery depending on OA, few PF OA are symptomatic
- Depending on the patients expectations
- If painful unicompartmental TF OA: UNI
- If Bicompartamental OA... Almost total OA= Total knee replacement !
