1st Case: 17 y.o. female Rugby Player

- Tackle injury 3 weeks ago
- Clinical exam in my office
 - Valgus deformity (1 hand)
 - ROM 0/0/130
 - Lachman soft end-point
 - Glide Pivot Shift
 - KT1000 13/7- Side To Side Diff 6mm
 - Moderated medial laxity in flexion and in extension (<15°)

Any comment on this MRI?

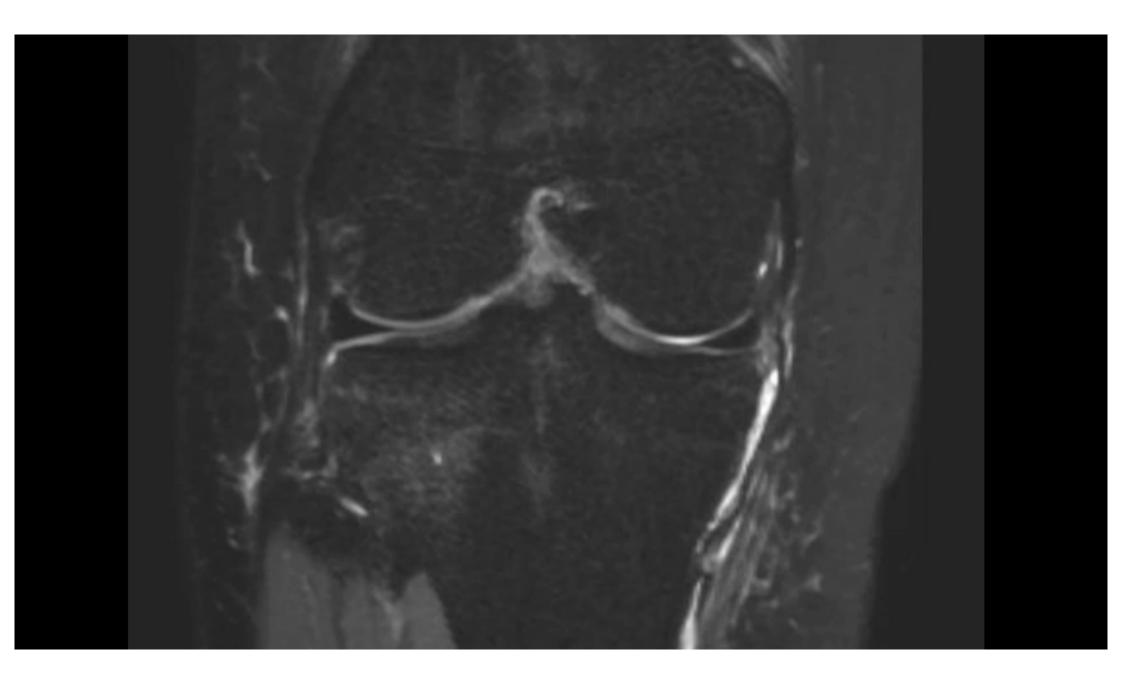

What is your treatment strategy?

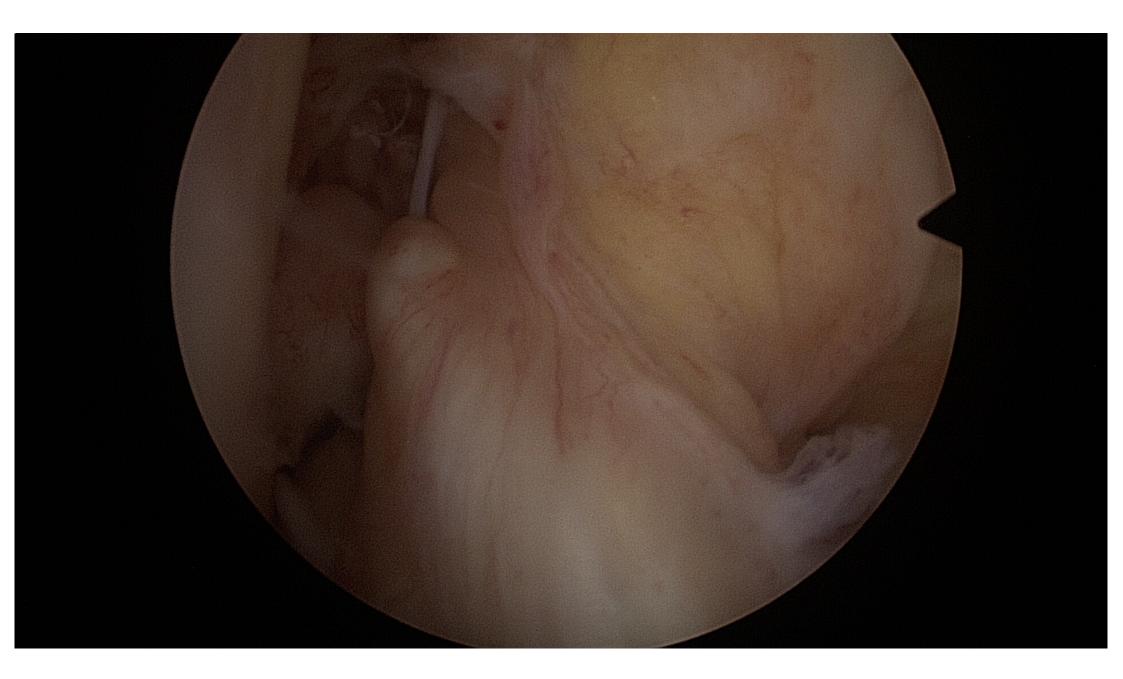

Type of graft?
When performing surgery?
Medial approach?
Post-operative care?

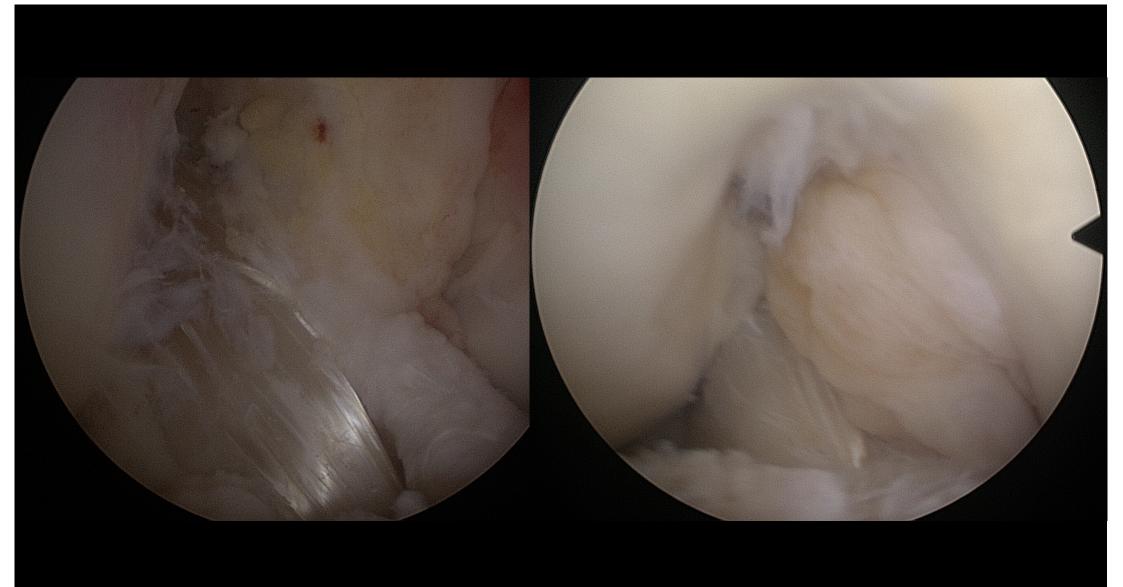

Do you change your treatment strategy?

Type of graft?
When performing surgery?
Medial approach?
Post-operative care?

Another example addressed in November 2020

- 19 years old Female Student playing Rugby
- ROM 0/0/140
- Lachman soft end point
- Clunk Pivot Shift
- KT1000 9/4 STS laxity with telos 9 mm
- Medial laxity in flexion, but not in extension

=> ISOLATED BTB

Any comment?

2nd Case: 18 y.o. Male Rugby Player

October 2010

- Professional player
- During a training, support and dislocation of right knee
 - ROM 0/0/125
 - Lachman soft end point
 - Clunk Pivot Shift test
 - KT1000 11/4 side to side diff lax: 7 mm
 - Medial joint line pain
- MRI
 - Isolated lesion of ACL

- BTB graft
- MM: partial tear left in place
- LM: Posterior horn flap + middle segment radial crack: debridement
- Cartilage: No lesion

June 2012 (20 y.o.)

New injury: change of direction

- H +
- Instability ++
- Painful point at lateral meniscus (LM)
- Lachman hard delayed end point
- Clunk Pivot Shift
- KT1000 9/5/4
- MRI:
 - Re-rupture ACL

Revision QT + LET Deep Lemaire

How would you explain this failure?

Any comment on revision?

Any advice to prevent new injury?

February 2014 (22 y.o.)

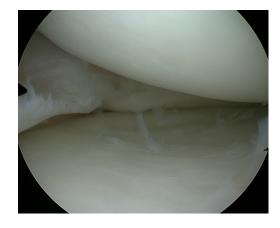

- 0/5/130
- H + I+ B+(Locked knee)
- Lachman soft end point
- Clunk Pivot Shift
- KT1000 12/6/6. / Telos 10/1
- MRI Isolated lesion of ACL
- Bucket Handle MM

- BTB graft
- MM: subtotal resection
- Cartilage: grade 2 lesion at medial femoral compartment

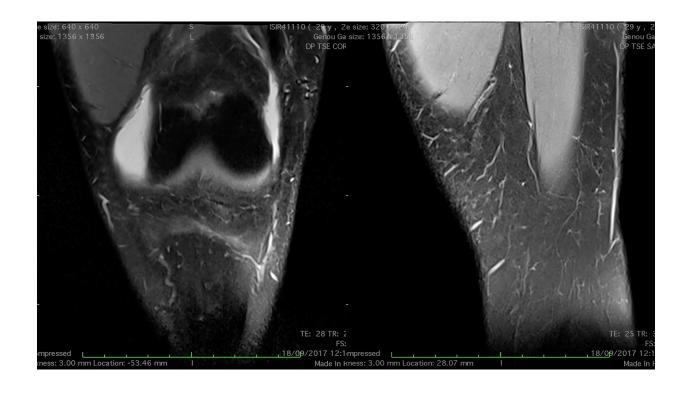

January 2018 (25 y.o.)

New injury fall down on the **left** knee

- ROM 0/0/130
- Lachman soft end point
- Clunk Pivot Shift
- KT1000 10/6
- Telos 15/3

Revision QT + LET Deep Lemaire

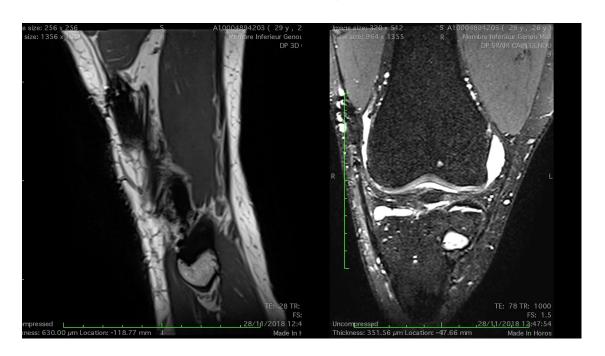

December 2018

Both Knees back to office with an MRI of both knees and abnormal aspect of the grafts

- Bilateral delayed hard end point
- Bilateral Equal Pivot Shift Telos 7/6
- Stopped to play (unable)

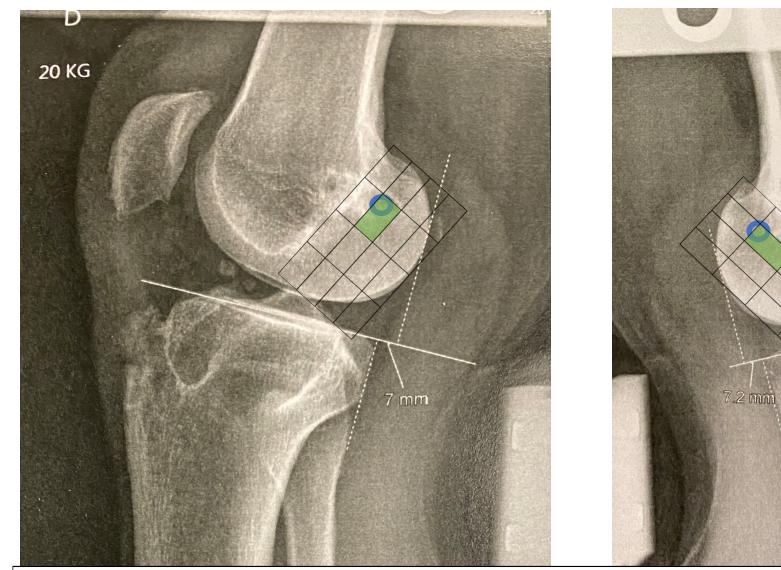

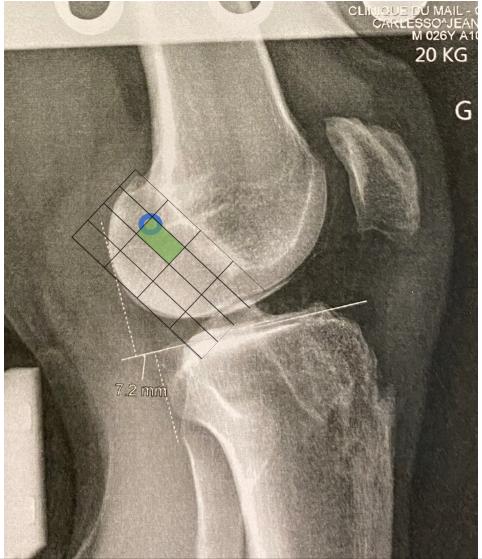

How do you explain the resorption of the grafts without injury?

Which investigation do you ask for?

1. Non-anatomic tunnel position increase the risk of revision ACL reconstruction K.J. Byrne and J.D. Hughes Knee Surg Sport Traum Arthroscopy. 2021

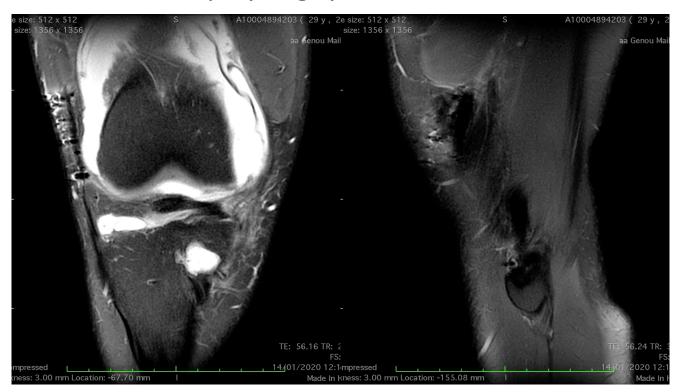

What is your advise to the patient? What would you do?

March 2019

Went back to sport

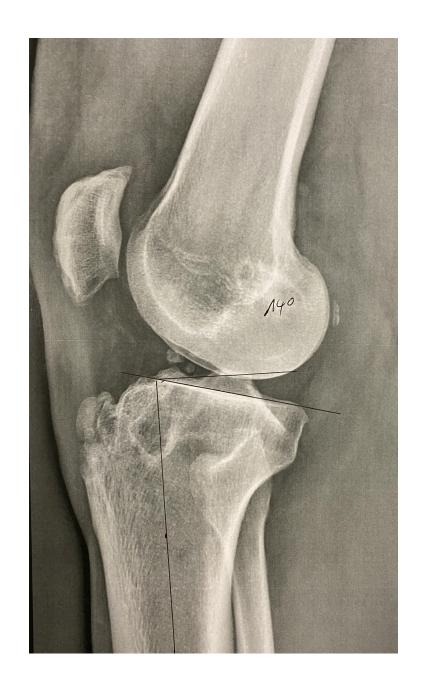

Locked knee

would like to play rugby and to ski...

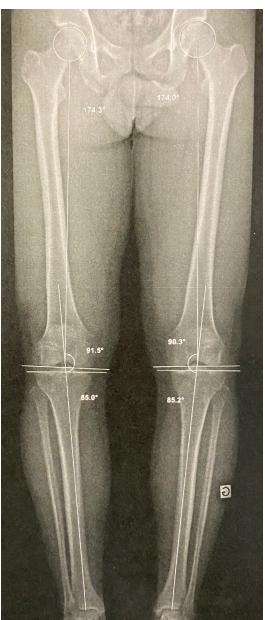

Simple Meniscectomy? Suture? Revision ACL surgery?

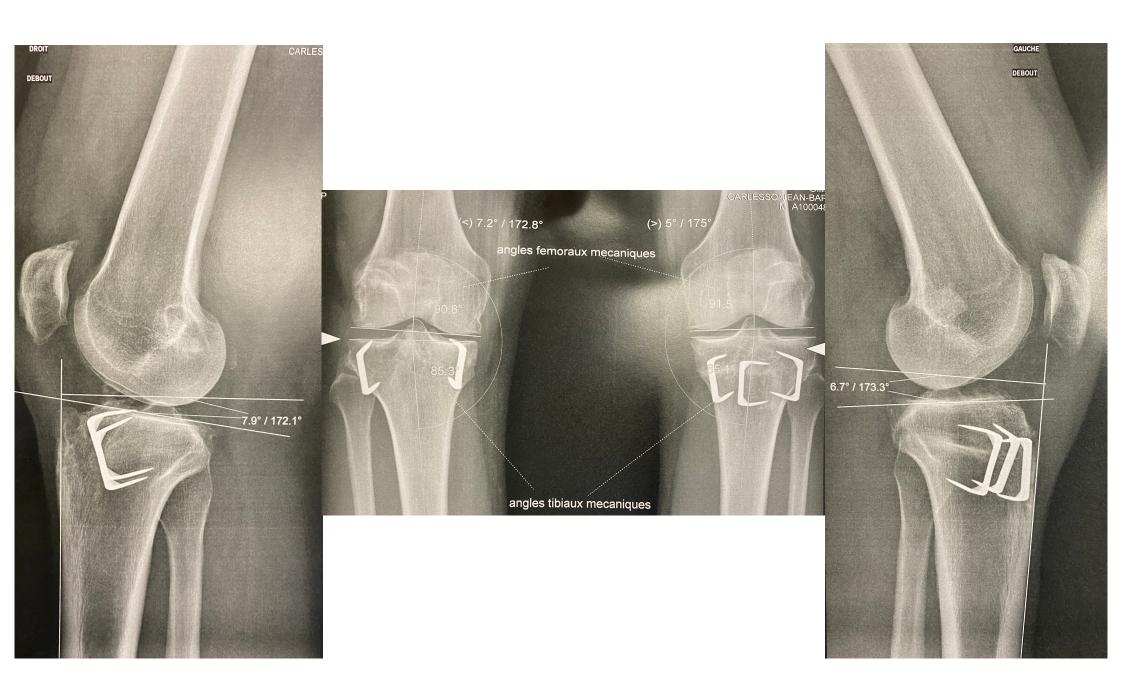

How do you manage? Any surgery?

January 2022

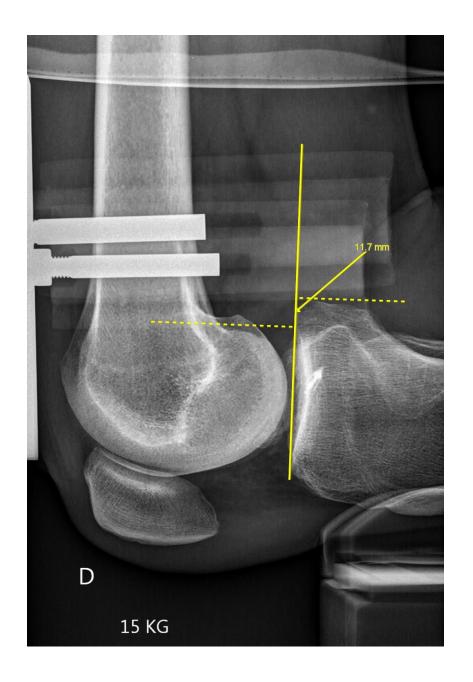

3rd Case: 27 y.o. Male physiotherapist high level motorcycle trial

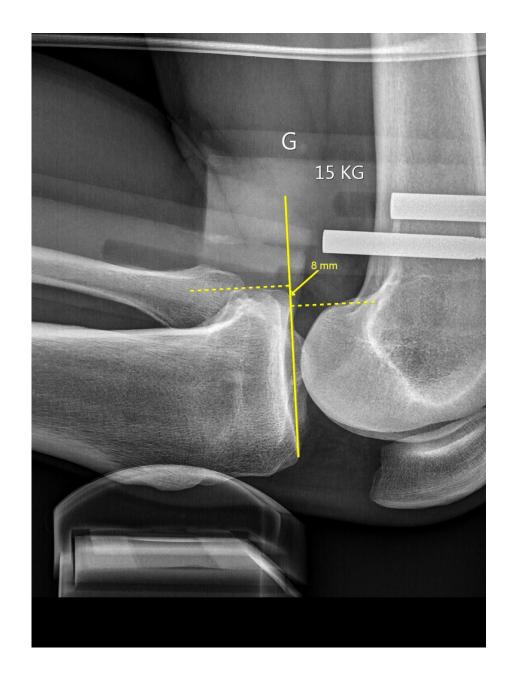

- At 8 years old rupture of ACL (fracture tibial spine) + suture Lateral Meniscus
- At 12 years old, failure of the suture of LM: Meniscectomy
- Complain: anterior knee Pain

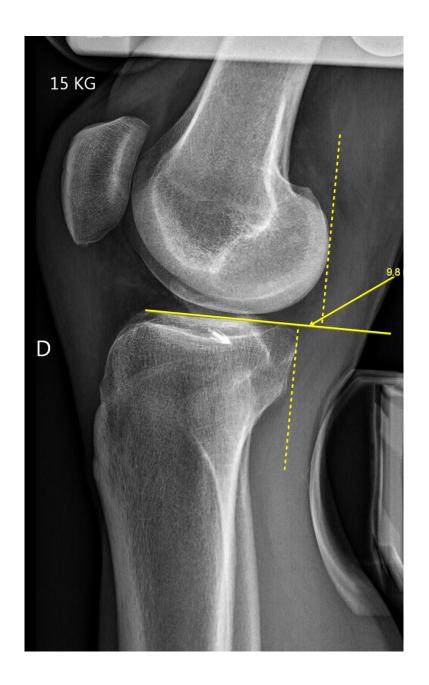

Any other investigation? What is your management?

Any surgery? Advice to the patient?
